# **COMCEC POVERTY OUTLOOK 2017**

COMCEC COORDINATION OFFICE September 2017

### Preface

The COMCEC Poverty Outlook is a contribution of the COMCEC Coordination Office to enrich the discussions during the Poverty Alleviation Working Group Meetings.

Poverty Alleviation Working Group is established in accordance with the COMCEC Strategy, adopted during the 4<sup>th</sup> Extraordinary Islamic Summit held on 14-15 August 2012 in Makkah Al Mukarramah. The COMCEC Strategy envisages Poverty Alleviation Working Group Meetings as one of its instruments for enhancing cooperation towards eradicating extreme poverty and hunger in the OIC Member Countries. In this respect, Poverty Working Group Meetings aim to provide a regular platform for the member country experts to deliberate on the issues related to poverty alleviation, and to share their experiences and good practices.

This COMCEC Poverty Outlook 2017 is the Fifth Issue of the COMCEC Poverty Outlook Series published by COMCEC Coordination Office. The COMCEC Poverty Outlook 2017 is prepared by Mr. Bilgehan ÖZBAYLANLI, Mr. Servet Orçun ERPİŞ and Mr. Mehmet Akif ALANBAY with the objective of providing an overview on the human development progress both at global and OIC level. In this edition of the Outlook, statistical tables and figures are updated while in the analysis, various comments which are still valid today are kept intact.

The views expressed and conclusions reached in this publication do not necessarily reflect the official views of the COMCEC Coordination Office, COMCEC or the governments of OIC Member Countries.

### Introduction

The Standing Committee for Economic and Commercial Cooperation of the Organization of Islamic Cooperation (COMCEC) has been working to enhance trade and economic cooperation among the Member Countries since 1984. Poverty alleviation occupies a significant place in the agenda of the COMCEC. Indeed, it is one of the six cooperation areas of the COMCEC Strategy adopted in 2012. Within this context, Poverty Alleviation Working Group has been established. The Working Group has held 9 meetings since 2013. The 10<sup>th</sup> Meeting will be held on October 5th, 2017 with the theme of "Education of Disadvantaged Children in the OIC: The Key to Escape from Poverty".

Poverty alleviation is an important component of economic and social development. Although most of the developing countries have experienced significant progress in poverty alleviation in recent years, poverty levels are still high in many countries. Especially, the countries in Sub-Saharan Africa and Asia account for nearly half of the total poor living in developing countries. The global financial crises and food shortages that have been encountered in the recent period have also worsened this situation.

Although the total population of the OIC Member Countries accounts for nearly one-fourth of the world's total population, their total GDP accounted for only 8.5 percent of the total world GDP in 2016. On the other hand, per capita GDP levels vary across the OIC Member Countries, (i.e. \$978 in Niger, \$127,523 in Qatar)<sup>1</sup>. The poverty status also displays a diverse picture in the OIC countries, since poverty headcount ratios in the Member Countries vary from zero to 69 percent.

Similar to the monetary poverty indicators that are mentioned above, non-monetary poverty indicators also vary across the OIC Member Countries. In this respect, their Human Development Index values are between 0.864 and 0.352, Multidimensional Poverty Index values are between 0.004 and 0.584, and Global Hunger Index values are between zero and 44.3.

Millennium Development Goals (MDGs) lead to a significant consciousness in poverty alleviation and contribute to the national efforts to a great extent. By the end of 2015 the MDGs process was completed. The Sustainable Development Goals and a new development agenda was launched in 2016.

The aim of this report is to provide an overview on the human development progress both at global and OIC level. Within this framework, in the first section the poverty situation in the World and the OIC Member Countries is examined briefly both in monetary and non-monetary terms. In the second section, human development progress in the OIC Member Countries is analyzed. The efforts towards poverty alleviation are explained in the third section.

<sup>&</sup>lt;sup>1</sup>The World Bank, 2016a.

### 1. Poverty Status in the World and the OIC Member Countries

The basic definition of poverty is "the inability of [an individual to possess] sufficient resources to satisfy [his or her] basic needs."<sup>2</sup> The definition and range of basic needs depend on the place and time, or even the source of the definition. Hence, there are several ways to investigate the poverty levels of the countries. One of the most frequently used methods is to define poverty in monetary terms, like the US\$1.90 a day poverty line of the World Bank<sup>3</sup> or the value of a minimum calorie requirements. Another frequently used method is to investigate poverty relatively by examining the income level of the population, such as 60 percent of the median income level like the Eurostat utilizes. Poverty arises not only when people have inadequate income, but also when they lack key capabilities or education, have poor health or insecurity, or when they experience the absence of rights.<sup>4</sup> In this sense, poverty is also investigated in non-monetary terms from a multidimensional viewpoint. The widely used non-monetary poverty indices are Human Development Index, Multidimensional Poverty Index, and Global Hunger Index.<sup>5</sup>

In this section, the poverty situation in the World and in the OIC member countries will be examined in both monetary and non-monetary terms. As the first aspect, poverty will be investigated in monetary terms by examining GDP per capita levels and poverty headcount ratios at US\$1.90 a day, (this level is the most prevalent method that is used to reveal the extreme poverty). As the second aspect, poverty will be investigated in non-monetary terms by looking at Human Development and Multidimensional Poverty indices as well as state of hunger (state of food deficiency and Global Hunger Index values) for the countries. However, the human development performance of OIC will be elaborated in more detail in a separate section, namely in Section 2. The state of poverty in the OIC member countries will be analyzed with respect to the four income groups defined by the World Bank.

### 1.1. Poverty Status in the World

#### 1.1.1. Monetary Poverty

For the year 2016, while the world's average GDP per capita PPP is \$16,143, this average is \$46,704 for the high income countries, \$16,746 for the upper-middle income countries, \$6,799 for the lower-middle income countries and \$1,683 for the low income countries<sup>6</sup> (Figure 1). These numbers imply deep income discrepancies between countries.

<sup>&</sup>lt;sup>2</sup> Fields 1994: 3.

<sup>3</sup> The World Bank updated international poverty line in 2015. The previous poverty line was US\$1.25.

<sup>&</sup>lt;sup>4</sup> Haughton and Khandker, 2009:2.

<sup>&</sup>lt;sup>5</sup> See Annex 1 for the explanation of the mentioned indices.

<sup>&</sup>lt;sup>6</sup> See Annex 4.

#### Source: Own calculations from World Development Indicators of the World Bank

For most of the countries, poverty levels decreased in monetary terms for the last three decades. Indeed, for the period 1981-2013 a significant progress is observed on the ratio of the people who live under US\$1.25. While, this ratio was 43.2 percent for upper-middle income countries, 42.3 percent for lower-middle income countries and 66,9 percent for low income countries in 1990, these ratios fell to 2.7 percent, 16,4 percent and 46.2 percent respectively for the so-called income groups in 2013 (Figure 2).

Figure 2: Poverty Headcount Ratio at US\$1.90 a day (PPP) (% of Population)

Source: Own calculation, from World Development Indicators of the World Bank

Despite a sustained acceleration on the income levels of the countries, some countries cannot benefit from that acceleration. To understand the extent of this disparity, non-monetary indicators of poverty are needed to be examined.

#### **1.1.2.** Non-Monetary Poverty

#### Human Development Index

Observing the human development categories and the income levels of the countries together, it is seen that for most of the cases the income level of a country is in parallel with its human development category. Indeed, as seen in the Table 1, 90 percent of the countries that is in 'very high human development category' have high income levels. On the other hand, 68 percent of the countries that is in 'low human development category' have low income levels, while 32 percent of the countries in the same category have lower-middle income<sup>7</sup>.

#### Table 1: Income Levels of the Different Categories of Human Development

		Low income	Lower- middle income	Upper- middle income	High income	Total
Low human development	# of countries	28	13	0	0	41
uevelopment	%	68%	32%	0%	0%	100.0%
Medium human	# of countries	1	31	9	0	41
development	%	2%	76%	22%	0%	100.0%
High human	# of countries	0	8	38	9	55
development	%	0%	15%	69%	16%	100.0%
Very high	# of countries	0	0	5	46	51
human development	%	0%	0%	10%	90%	100.0%

Source: Own calculations from UNDP (2016).

#### **Multidimensional Poverty Index**

Among the countries for which multidimensional poverty index is calculated; 1.96 percent is high income, 28.43 percent is upper-middle, 41.18 percent is lower-middle and 28.43 percent is low income countries (Figure 3). The MPI value ranges from 0.001 (Ukraine) to 0.584 (Niger).

<sup>&</sup>lt;sup>7</sup> See Annex 5 for the full list related to the HDI values of the countries.

Figure 3: Share of Income Level Categories for Countries with Multidimensional Poverty (%) 1,96% 28.43% 28.43% High income Low income Lower middle income Upper middle income 41.18%

The percentages of the deprived population vary significantly within the same income group countries. Looking at the contribution of deprivation in education (namely years of schooling and child school attendance) to overall poverty, it ranges between 1.5 and 2.2 percent for high income countries, 2.6 and 50.1 percent for upper-middle income countries, 3.4 and 54.7 percent for lower-middle income countries and 10.8 and 45.6 for low income countries. The range for health is much wider. It changes between 86.1 and 95.9 percent for high income countries, between 24.7 and 89.70 percent for upper-middle income countries, 12.6 and 87.8 percent for lower-middle income countries and 14.3 and 34.5 percent for low income countries. Likewise, the contribution of deprivation in living standards indicator ranges from 2.6 to 11.7 percent for high income countries, from 7.7 to 50.8 percent for upper-middle income, from 3.5 to 56.6 percent in lower-middle income and from 33.9 to 54.9 percent in low income group. The difference between the deprivation levels of the MPI indicators among different income group countries is striking.8

#### **State of Hunger**

According to FAO, there are 52 low-income food-deficit countries in total, of which 37 are in Africa, 11 are in Asia, 2 are in America and 2 are in Oceania.<sup>9</sup> To understand the hunger situation of the countries, it is helpful to look at the GHI values. In this regard, according to the GHI trend between 2000 and 2016, severity of hunger is found to be decreasing globally. Indeed, while the value of the 2000 GHI for the developing world was 30.0, this value is 21.3 for 2016, which

Source: Own calculations from UNDP (2016).

<sup>&</sup>lt;sup>8</sup> Own calculations from UNDP(2016).

<sup>&</sup>lt;sup>9</sup> FAO, 2016. Low-income food-deficit countries are the countries with a net income per person that falls below the level used by the World Bank to determine eligibility for IDA assistance and net importers of food. For full list of low-income-food-deficit countries. See Annex 6.

accounts to a decrease of 29 percent<sup>10</sup>. Despite this improvement, 50 countries are in serious situation and alarming situation.<sup>11</sup>

### **1.2.** Poverty Status in the OIC Member Countries

In this sub-section, the poverty status in the OIC Member Countries will be briefly analyzed in monetary and non-monetary terms. Firstly, this analysis will be made for the OIC Countries in general. Afterwards, in order to make a clear analysis for the OIC Countries, the poverty status in these countries will be elaborated in respect to the income categories, namely high, upper-middle, lower-middle and low income categories.

#### **1.2.1.** Monetary Poverty

#### **COMCEC** in General

The COMCEC have 57 member countries which are dispersed over four continents. Although the total population of the member countries accounts for nearly the one-fourth of the world's total population, the total GDP of these countries accounts for less than nine percent of the total world GDP. The OIC Member Countries do not form a homogeneous group. In this context, GDP per capita levels of the OIC Countries display a highly dispersed composition; hence they vary from \$978 to \$127,523.<sup>12</sup>

16 of the OIC Countries are in the Low-Income Country Group,<sup>13</sup> and the total population of the low income OIC Countries is 14% of the OIC Region. On the other hand, the total GDP of these countries is only 2.3% of the total GDP of the OIC Region. Within the last three years three countries were passed to lower-middle income group, namely Kyrgyzstan, Bangladesh and Tajikistan.

The number of people who live under US\$1.90 a day in the OIC Region is 277.3 million, with the available data for the period 2003-2014.<sup>14</sup> The shares of the poor population in the low income OIC Countries account almost half of their total populations (See Figure 10).

#### **High Income OIC Member Countries**

High income refers to an income level (GNI per capita; current US\$) of higher than US\$12,236. In this regard, the high income OIC Member Countries are Bahrain, Brunei Darussalam, Kuwait, Oman, Qatar, Saudi Arabia and United Arab Emirates.

In this group of countries GDP per capita (PPP; Current International \$) is high and ranges between \$42,737 (Oman) and \$127,523 (Qatar) (Figure 4). Parallel to high income in these countries, there is no people living below US\$1.90 poverty threshold.

<sup>&</sup>lt;sup>10</sup> IFPRI et.al., 2015.

<sup>&</sup>lt;sup>11</sup> See Annex 7.

<sup>&</sup>lt;sup>12</sup> See Annex 4.

<sup>&</sup>lt;sup>13</sup> The World Bank, 2016a.

<sup>&</sup>lt;sup>14</sup> Ibid.

#### **Upper-Middle Income OIC Member Countries**

Upper-middle income refers to an income level (GNI per capita; Current US\$) that is higher than US\$3,956 and lower than US\$12,235. In this regard, the upper-middle income OIC Member Countries are Gabon, Guyana, Algeria, Libya, Tunisia, Iraq, Lebanon, Azerbaijan, Kazakhstan, Turkmenistan, Albania, Suriname, Malaysia, Iran, Turkey and Maldives.

The GDP per capita (PPP; Current International\$) in upper-middle OIC Countries has a diverse pattern. While this indicator is \$7,819 in Guyana, it reaches to \$27,681 in Malaysia. Kazakhstan, Malaysia and Turkey have high GDP per capita values compared to the rest of the group (Figure 5).

Source: The World Bank, 2016a.

#### Figure 5: GDP per-capita (PPP, Current Int. \$) in the Upper Middle-Income OIC Member Countries, 2016

Despite the fact that number of people living below US\$1.90 among upper-middle income OIC countries is very low, in some member countries like Gabon and Maldives the number of people living under the poverty circumstances is relatively high (Figure 6).

Source: The World Bank, 2016a.

Note: Data regarding poor population living below US\$ 1.90 in Algeria, Iraq, Lebanon, Libya, Suriname and Turkmenistan is not calculated.

Source: The World Bank, 2016a.

#### Lower-Middle Income OIC Countries

Lower-middle income refers to an income level (GNI per capita; Current US\$) that is between US\$1,006 and US\$3,955. In this regard, the lower-middle income OIC Member Countries are Bangladesh, Cameroon, Cote d'Ivoire, Djibouti, Egypt, Indonesia, Jordan, Kyrgyzstan, Mauritania, Morocco, Nigeria, Pakistan, Palestine, Sudan, Syria, Tajikistan, Uzbekistan and Yemen.

In the lower-middle income group, GDP per capita (PPP; Current International\$) levels vary between \$2,508 and \$11,612. 12 out of 19 countries in this group have GDP per capita levels which are lower than \$6,000, namely Yemen, Palestine, Tajikistan, Cameroon, Djibouti, Kyrgyzstan, Bangladesh, Cote d'Ivoire, Mauritania, Sudan, Pakistan, Nigeria; less than half have a GDP per capita level which is higher than \$6,000, namely Jordan, Guyana, Morocco, Egypt, Uzbekistan and Indonesia (Figure 7).

Source: The World Bank, 2016a.

Note: Data for Syria is not available. Also data used for Djibouti belongs to 2015.

Poverty headcount ratios of the lower-middle income countries display a highly diverse picture. While this ratio is lower than 5 percent in only four countries (Palestine, Egypt, Syria and Morocco), it is between 5 percent and 30 percent in nine countries (Cameroon, Indonesia, Yemen, Djibouti, Sudan, Pakistan, Mauritania, Tajikistan and Kyrgyzstan), and higher than 30 percent in four countries (Senegal, Cote d'Ivoire, Bangladesh and Nigeria) (Figure 8).

Figure 8: Poverty Headcount Ratio at US\$1.90 a day in Lower-Middle Income OIC Member Countries (PPP) (%)

Source: The World Bank, 2016a. Note: Data for Egypt, Jordan, Guyana, Syria and Yemen are not available. Also latest data between 2002 and 2014 is used.

#### Low Income OIC Member Countries

Low income refers to an income (GNI per capita; Current US\$) level that is US\$1,005 or less. In this regard, the low income OIC Member Countries are Afghanistan, Benin, Burkina Faso, Chad, Comoros, the Gambia, Guinea, Guinea-Bissau, Mali, Mozambique, Niger, Senegal, Sierra-Leone, Somalia, Togo and Uganda.

In the low income group, GDP per capita (PPP; Current International\$) levels vary between \$978 and \$2,568 (Figure 9). One third of these countries have GDP per capita levels which are lower than \$1,500, namely Niger, Mozambique, Togo, Guinea and Sierra Leone.

Figure 9: GDP per-capita in Low Income OIC Member Countries (PPP, Current Int. \$) 2016

Poverty headcount ratios of the low income countries are very high in general. In fact, all the countries in this income group have poverty headcount ratios at US\$1.90 a day higher than 25 percent except Comoros (Figure 10).

Source: The World Bank, 2015a. Note: Data for Afghanistan and Somalia are not available.

Source: The World Bank, 2016a. Note: Data for Somalia is not available.

### **1.2.2.** Non-Monetary Poverty

#### **COMCEC** in General

#### Human Development Index

When the OIC Member Countries are examined in terms of Human Development Index (HDI) values, a heterogeneous composition is observed (Figure 11). The HDI values for the OIC member countries range from 0.864 (Brunei Darussalam) to 0.352 (Niger). While 6 OIC Member Countries are in the very high human development category, 15 are in the high, 12 are in the medium and 23 are in the low human development category. Somalia has not an HDI value.

Figure 11: Distribution of OIC Member States in Different Human Development Categories

Source: UNDP (2016).

#### Multidimensional Poverty Index

Looking at the group of countries for which MPI is calculated, it is observed that 79 percent of the OIC member countries are included in this group. Among the OIC member countries which have MPI values, 22 percent is upper-middle, 42 percent is lower-middle and 36 percent is low income countries (Figure 12). The population living in multidimensional poverty changes a lot among the OIC member countries. While in Kazakhstan this rate is only 1.1 percent, in Niger it reaches to almost 90 percent. Totally, almost 15 percent of total the population in the OIC member countries live under multidimensional poverty.<sup>15</sup>

<sup>&</sup>lt;sup>15</sup> Calculated by using the data from the UNDP, 2015 and the World Bank 2015a.

Multidimensional Poverty (%) 10: 22% 16; 36% Low Lower Middle Upper Middle 19; 42%

# Figure 12: Share of Income Level Categories for the OIC Member Countries with

The contribution of deprivation in education to overall poverty for the OIC Region is between 3.7 percent (Uzbekistan) and 54.7 percent (Syria). The same range for the contribution of deprivation in health to overall poverty is between 18.8 percent (Somalia) and 83.9 percent (Kazakhstan), and for the contribution of deprivation in living standards to overall poverty is between 3.5 percent (Jordan) and 51.9 percent (Uganda).

#### State of Hunger

More than half of the OIC Member Countries are defined as low-income food deficit country according to the classification of the FAO.<sup>16</sup> Regarding the GHI values for these countries, an important improvement is observed. While the mean value of the OIC member countries was 35.1 for the year 1990, this value declined to 20.4 in 2016.<sup>17</sup> The GHI values of the Member Countries range between zero and 44.3. None of the member countries experience an extremely alarming hunger situation, 3 countries are in alarming situation, and 21 countries are in serious situation of which Afghanistan is the most severe one. On the other hand, 9 member countries are in moderate hunger situation and 13 countries are in low hunger situation.

Source: UNDP (2016) and the World Bank, 2016b.

<sup>&</sup>lt;sup>16</sup> See Annex 5.

<sup>&</sup>lt;sup>17</sup> See Annex 6.

#### **High Income OIC Countries**

#### <u>Human Development Index</u>

Analysis of high income OIC Member Countries according to their HDI values, shows that all countries in this group are in very high human development category, except Oman which is classified in high human development category (Figure 13).

Figure 13: HDI Values of High Income OIC Member Countries

The values for the first dimension of HDI, GNI per capita (2011 PPP\$), are between US\$34,402 (Oman) and US\$129,916 (Qatar) for the high income countries which are above the average GNI value for the Very High Human Development (VHHD) category which is US\$39,605, except Bahrain (US\$37,236) and Oman (US\$34,402). However, for all the other dimensions (life expectancy at birth, mean years of schooling and expected years of schooling) the index values of the high income OIC countries are below the average index values of the VHHD. Indeed, the index values for life expectancy at birth of these countries are between 74.4 (Saudi Arabia) and 79 (Brunei Darussalam) while the average value of the VHHD is 79.4; mean years of schooling values are between 7.3 (Kuwait) and 9.8 (Qatar) while the average value for the VHHD category is 12.2; and expected years of schooling values are between 13.3 (United Arab Emirates and Kuwait) and 16.1 (Saudi Arabia) while the average value for the VHHD category is 16.4.

#### Multidimensional Poverty Index

Data for multidimensional poverty index is not available for high income OIC member countries.

#### <u>State of Hunger</u>

High income does not experience food deficiency. Similarly, among high income OIC Member Countries only Saudi Arabia, Kuwait and Oman has data related to global hunger index and the

Source: UNDP, 2016.

index for Saudi Arabia and Kuwait is negligible (below 5), but Oman's situation is moderate (10,4).

#### **Upper-Middle Income OIC Member Countries**

#### <u>Human Development Index</u>

While 12 out of 15 upper-middle OIC income countries are in high human development category, the rest are in medium human development category (Figure 14). Kazakhstan has the highest HDI value in this group and positioned at 56 in the ranking, on the other hand, Iraq's HDI value is the lowest with 0.649 positioning at 121.

Index values for the first dimension of HDI, GNI per capita (2011, PPP, US\$), are between US\$10,249 (Tunisia) and US\$24,620 (Malaysia) for the high income countries of which nearly two-thirds are above the average GNI value for the High Human Development (HHD) category, which is US\$13,844. Index values for the second dimension, life expectancy at birth, are between 64.9 (Gabon) and 79.5 (Lebanon) of which more than half are below the average life expectancy at birth value for the HHD category (75.5). Regarding the third dimension, mean years of schooling, half of the upper-middle income OIC countries have an index value that is lower than the average index value, which is 8.3, and ranges between 6.2 (Maldives) and 11.7 (Kazakhstan). Lastly, almost all of these countries' index values for the fourth dimension, expected years of schooling, are above the average index value (except Iraq 10,1 and Turkmenistan 10,8), which is 12.3, and range between 10.1 (Iraq) and 15 (Kazakhstan).

#### Figure 14: HDI Values of Upper-Middle Income OIC Member Countries

#### Multidimensional Poverty Index

Among upper-middle income countries, MPI is lowest in Kazakhstan (0.004) and highest in Gabon (0.073). Indeed, while the multidimensional poverty rate is between 1 and 3 percent in Kazakhstan, Albania, Libya, Maldives, Azerbaijan and Turkmenistan, it is more than 7 percent in Suriname, Guyana, Iraq and Gabon. When the multidimensional poverty rates of these countries compared to their monetary poverty rates, it is seen that the rates of population living in

Source: UNDP, 2016.

multidimensional poverty exceed the rates of population living in income poverty (Figure 6 and Figure 15).

The contribution of deprivation in education to overall multidimensional poverty ranges between 4.3 (Kazakhstan) and 50.1 (Iraq), and the contribution of deprivation in living conditions ranges between 10,1 (Turkmenistan) and 40.9 (Gabon), while the contribution of deprivation in health is generally the highest which ranges between 37.2 (Suriname) and 83.9 (Kazakhstan).

#### <u>State of Hunger</u>

None of the upper-middle income countries are classified under low-income food-deficit countries.<sup>18</sup> Most of the countries in this group have low or moderate levels of hunger (Table 2).

Source: UNDP,2016. Note: Index values for Algeria, Iran, Lebanon, Malaysia, Tunisia and Turkey are not calculated.

<sup>&</sup>lt;sup>18</sup> See Annex 5.

#### Table 2: Global Hunger Index Values of Upper-Middle Income OIC Member Countries

Source: IFPRI et.al., 2016. Note: Index value for Maldives is not calculated.

#### Lower-Middle Income OIC Countries

#### Human Development Index

In the lower-middle income group, Jordan and Uzbekistan are in high human development category, nearly half of the countries are in the low human development category, namely Syria, Nigeria, Cameroon, Mauritania, Sudan, Yemen, Cote d'Ivoire and Djibouti and the rest is in the medium human development category, namely Egypt, Indonesia, Palestine, Kyrgyzstan, Morocco, Tajikistan, Bangladesh and Pakistan. (Figure 16). The highest HDI value is 0.741 and belongs to Jordan, with a position of 86 in the HDI ranking, while the lowest value is 0.473 and belongs to Djibouti, with a position of 172.

Regarding the first dimension of HDI, GNI per capita (2011, PPP, US\$) the index values of the lower-middle income countries range between US\$2,300 and US\$10,111, and only four countries (Indonesia, Egypt, Morocco and Jordan) have a GNI value which is above the average GNI value for the Medium Human Development category (US\$6.281). Index values for the second dimension, life expectancy at birth, range between 51.9 (Cote d'Ivoire) and 74,3 (Morocco) of which nearly more than half are below the average index value for the MHD category (68.6). For the third dimension, mean years of schooling, the index values of this group vary between 3 (Yemen) and 12.2 (Uzbekistan), and more than one third of them are above the average index value (6.6). Regarding the fourth dimension, expected years of schooling, nearly three-fourth of these countries have an index value less than the average index value (11.5), ranging between 6.3 (Djibouti) and 13.1 (Jordan and Egypt).

#### Figure 16: HDI Values of Lower-Middle Income OIC Member Countries

Source: The UNDP, 2016.

#### **Multidimensional Poverty Index**

MPI values for the lower-middle income OIC Member Countries are in the range of 0.004 (Jordan) – 0.307 (Cote d'Ivore).<sup>19</sup> In the lower-middle income group, half of these countries have an MPI value that is two-times or more higher than the highest MPI value in the upper-middle income group. Indeed, the MPI values of more than half of the lower-middle income countries are above 0.073 which is the highest MPI value of the upper-middle income group (Figure 17). In this group, the share of population live in multidimensional poverty ranges between 1.2 percent (Jordan) and 59,3 percent (Cote d'Ivore). In almost half of the lower-middle income countries, more than 40 percent of the population is multi-dimensionally poor.

Figure 17: Multidimensional Poverty in Lower-Middle Income OIC Member Countries (%)

Source: The UNDP (2016).

<sup>19</sup> See Annex 8.

The contribution of deprivation in education to overall multidimensional poverty ranges between 3.7 (Uzbekistan) and 54.7 (Syria) and the contribution of deprivation in living conditions ranges between 3.5 (Jordan) and 48.9 (Sudan), while the contribution of deprivation in health is the highest which ranges between 20.3 (Mauritania) and 83.4 (Uzbekistan).

#### State of Hunger

In lower-middle income group, more than half of the countries, namely Bangladesh, Cameroon, Djibouti, Cote d'Ivoire, Kyrgyzstan, Mauritania, Nigeria, Pakistan, Sudan, Syria, Tajikistan, Yemen, and Uzbekistan are in the position of "low income food-deficit country".<sup>20</sup> Looking at the GHI values of the countries in this group, a similar picture is observed (

Table **3**).

#### Table 3: Global Hunger Index Values of Lower-Middle Income OIC Member Countries

Country	1990	1995	2000	2005	2016
Bangladesh	52,2	50,3	38,5	31,0	27,1
Cameroon	39,8	43,7	40,4	34,0	22,9
Côte d'Ivoire	33,8	32,1	31,4	32,7	25,7
Djibouti	56,1	56,1	48,5	46,1	32,7
Egypt	20,5	18,9	15,1	13,1	13,7

Source: IFPRI et.al., 2015.

Note: Index values for Palestine, Sudan and Syria are not calculated.

#### Low Income OIC Member Countries

#### Human Development Index

All the low income OIC counties are in the low human development (LHD) category. While the highest HDI value is 0.497 and belongs to Comoros, with a position of 160 in the HDI ranking, the lowest value is 0.352 and belongs to Niger, with a position of 187 (Figure 18).

<sup>&</sup>lt;sup>20</sup> See Annex 5.

#### Figure 18: HDI Values of Low Income OIC Member Countries

Index values for the first dimension of HDI, GNI per capita (2011, PPP, US\$), range between US\$889 (Niger) and US\$2,250 (Senegal) in the low income group, and the GNI values of all the countries in this group are below the average GNI value for the LHD category which is US\$2,649. Regarding the second dimension, life expectancy at birth the index values are between 51.3 (Sierra Leone) and 66.9 (Senegal). For the third dimension, mean years of schooling, the index values of this group vary between 1.4 (Burkina Faso) and 5.7 (Uganda), and only three countries (Comoros, Togo and Uganda) have index values above the LHD average value which is 4.6. Index values for the fourth dimension, expected years of schooling, is the best among the HDI dimensions, since almost half of the low income countries have an index value which is above the LHD average index value (9.3) ranging between 5.4 (Niger) and 12 (Togo).

#### <u>Multidimensional Poverty Index</u>

MPI values for the low income OIC Member Countries are between 0.165 (Comoros) and 0.584 (Niger).<sup>21</sup> For all the countries Except Comoros and Togo in this income group, the rates of the population in multidimensional poverty are higher than 50 percent (Figure 19). The highest share belongs to Niger with almost 90 percent. The share of population in severe multidimensional poverty ranges between 14.9 percent (Comoros) and 73.5 percent (Niger), and 6 out of 16 low income OIC countries' more than half of the population are in severe poverty.

Source: UNDP, 2016. Note: Calculated index value for Somalia is not included in the index ranking.

<sup>&</sup>lt;sup>21</sup> See Annex 8.

Source: UNDP, 2016.

The contribution of deprivation in education to overall multidimensional poverty ranges between 18 (Uganda) and 45.6 (Afghanistan), the contribution of deprivation in health ranges between 18.8 (Somalia) and 30.9 (the Gambia), and the contribution of deprivation in living conditions ranges between 33.4 (Senegal) and 51.9 (Uganda).

#### State of Hunger

All the countries in the low income group are in the position of "low income food-deficit country". The GHI values of these countries ranged from 16.5 (Senegal) to 44.3 (Chad) in 2016. 11 out of 16 of these countries have serious hunger situation, 2 countries have an alarming situation, 1 country has moderate hunger situation and index values for two countries are not available (Table 4).

Country	1990	1995	2000	2005	2016
Afghanistan	47,4	55,9	52,5	44,9	34,8
Benin	46,1	42,6	38,2	33,3	23,2
Burkina Faso	53,0	46,1	48,4	49,6	31
Chad	65,0	60,6	52,0	53,1	44,3
Gambia	36,4	35,4	27,9	26,3	20,9
Guinea	47,8	45,8	44,4	38,0	28,1
Guinea-Bissau	-	45,2	43,9	31,9	27,4
Mali	51,9	51,3	43,9	38,3	28,1
Mozambique	64,5	63,2	49,2	42,4	31,7
Niger	64,7	62,7	53,0	42,8	33,7
Senegal	36,8	36,9	37,9	28,5	16,5
Sierra Leone	58,8	56,0	53,5	52,4	35
Тодо	42,5	44,1	38,6	36,4	22,4
Uganda	39,8	40,9	39,3	32,2	26,4

Note: Index values for Comoros and Somalia are not calculated.

### 2. Trends in Human Development in OIC Member States

This section aims to analyze the trends in human development in OIC member states by utilizing Human Development Reports (HDR) published by UNDP. Human development requires expanding the richness of human life. This approach focuses on people and their opportunities and choices rather than economy. Based on this paradigm, UNDP produces HDR's since 1990 and the most recent report was published in 2016.

#### 2.1. International Comparison of Human Development Trends

Figure 20 shows the change in human development index (HDI) for selected country groups between 1990 and 2015. All of the selected groups experienced an increase in this period. The world average has increased from 0.597 to 0.717. The OIC average rose from 0.500 to 0.621 and remained significantly below the OECD and world average. OIC's HDI values are only higher than those of LDCs. On the other hand, the gap between the OIC and developing countries has enlarged in the last 25 years. In 1990, it was only 0.014 points whereas it has risen to 0.047 points in 2015 implying a more rapid progress in developing countries.

Source: Own calculations from UNDP (2016).

Note: The averages are unweighted. That is, each country in the groups has the same weight irrespective of its population.

The annual growth rate in HDI values between 1990 and 2015 are given in Figure 21. Not surprisingly, the annual growth rate is higher for the groups with lower initial HDI values. During the period, OIC member states exhibit almost 1.03 percent growth per year. This rate is higher than that of OECD and world but lower than developing countries and LDCs. The

difference between growth rates of OIC member states and developing countries also explains the widening gap between the HDI values of these country groups. Given the current growth rate, it will take approximately another 25 years<sup>22</sup> for the OIC to reach the current level of world average.

Figure 21: Annual growth rate in HDI between 1990 and 2015

Source: Own calculations from UNDP (2016).

Note: The rates are calculated as the annual compound growth rate.

### 2.2. The current level of human development in OIC

The progress in human development in OIC member states is highly uneven. The HDI values varies between 0.352 (Nigeria) and 0.854 (Brunei Darussalam) according to HDR 2016. 25 out of 56 OIC member states have below OIC average HDI values and the remaining 31 have above average HDI values.

Brunei Darussalam, Qatar, Saudi Arabia, United Arab Emirates, Bahrain and Kuwait have HDI values above 0.800 and are all placed in very high human development category. This implies only 6 out of 51 very high human development countries (11.8 percent) are from OIC. Oman, Kazakhstan, Malaysia, Iran, Turkey, Albania, Lebanon, Azerbaijan, Algeria, Jordan, Suriname, Tunisia, Libya, Maldives and Uzbekistan are in high human development category with their HDI values between 0.700 and 0.800. These countries constitute 27.3 percent of this category (15 out of 55). With HDI values between 0.550 and 0.700, Gabon, Turkmenistan, Egypt, Indonesia, Palestine, Kyrgyzstan, Iraq, Morocco, Guyana, Tajikistan, Bangladesh and Pakistan are the members of medium human development category. According to HDR 2016, 12 out of 41 country in low development category is from OIC. Finally, Syria, Nigeria, Cameroon, Mauritania, Comoros, Senegal, Uganda, Yemen, Sudan, Togo, Benin, Yemen, Afghanistan, Côte d'Ivoire,

<sup>22</sup> Own calculations.

Djibouti, Gambia, Mali, Guinea-Bissau, Sierra Leone, Mozambique, Guinea, Burkina Faso, Chad and Niger are in low development category and these countries constitute 56.1 percent of this category (23 out of 41). Considering that OIC member states constitute nearly 30 percent of the countries that are included in HDR 2016 (56 out of 188), the figures imply OIC is significantly underrepresented in very high category and significantly overrepresented in low development category.

#### Figure 22: HDI value of OIC Member States in HDR 2016

Source: UNDP (2016)

### 2.2.1. Trends in OIC

Figure 23 shows the evolution of HDI for OIC member states in different income groups between 1990 and 2015. It reveals that there is an improvement for each income group in the defined period. It also clearly shows that the HDI values are strongly associated with income level. The HDI values consistently increases as income group rises. High income and upper-middle income countries exhibit HDI trends that are over the OIC average and the lower-middle and low income countries have lower HDI values compared the OIC average.

Figure 23: Trends in Human Development Index of OIC Member States by income groups, 1990-2015

Source: Own calculations from UNDP (2016)

Note: The averages are unweighted. That is, each country in the groups has the same weight irrespective of its population.

It is worth mentioning that, the HDI level of low income countries in 2015 is even lower than that of OIC average in 1990. This shows that the low income countries could not catch up with 1990 OIC HDI level in the last 25 years. On the other hand, Figure 24 reveals that there is a sign of convergence. Accordingly, low income countries grew at much higher rates than other income groups over the period. The growth rate of low income group was more than 3 times higher than that of high income countries and more than two times higher than upper middle income group.

Another thing to note is that the high income group exhibits a higher level of annual growth compared to OECD average. The same thing is true for low income countries when compared with LDC's.

Figure 24: Annual growth rate in HDI of OIC Member States by income groups between 1990 and 2015

Source : Own calculations from UNDP (2016)

Note: The rates are calculated as the annual compound growth rate.

Although the HDI value increases with income, the association between income and HDI rank is more ambiguous at the country level for the given income groups. The last column of Table 5 includes the difference between HDI rank and gross national income (GNI) rank for different income groups. This difference is -6.1 on average for OIC implying that human development lags behind the economic prosperity in the OIC member states in general. This difference is much smaller for low and lower-middle income countries (2.1 and 0.6 respectively). However, it is considerable higher for upper-middle income and high income countries. The difference for high income group is almost -30 implying that this group was not able to translate its wealth into human development as much as the other high income countries.

	Life expectancy (years)	Expected years of schooling (years)	Mean years of schooling (years)	GN
OIC	67,4	11,3	6,6	14
Low income	58,9	9,2	3,2	1.5
Lower middle income	66,3	10,4	6,6	4.9
Upper middle income	72,6	13,1	8,6	14
High income	76,7	14,2	9,0	66

Table 5: Components of HDI by income groups, 2015

Source: Own calculations from UNDP (2015).

Note: The averages are unweighted. That is, each country in the groups has the same weight irrespective of its population.

Table 5 also represents the level of different component of HDI. On OIC average, the life expectancy is 67.4, the expected and mean years of schooling is 11.3 and 6.6 respectively and GNI is \$14,621. The level of all the 4 parameters increases by income group. For low income group, the level of life expectancy and mean years of schooling are much lower than OIC average.

The lower middle income group has life expectancy, expected and mean years of schooling values that are very close to OIC average. For high income countries, all the parameters except expected and mean years of schooling have values that are remarkably higher than upper-middle income group. However, the mean years of schooling is only 0.4 years higher than that of upper-middle income this group. Probably, it is mean years of schooling that causes such a high difference between HDI and GNI rank for high income group.

#### 2.2.2. Evaluation of Human Development Categories for OIC Member States

In HDR's, the countries are grouped according to their HDI value. From the first HDR (1990) until 2009, there were three categories, namely "low", "medium" and "high" human development. However, this changed in HDR 2009 and a "very high" human development category was added to the existing three categories. For this reason, the distribution of OIC member states within these categories are given in two different tables (see Table 6 and Table 9).

In 1990, only 38 OIC member states were included in the HDR. Of these, 22 were exhibiting low human development, 14 were in medium human development category and only 2 countries in the high human development category. In 2000, the number of OIC member states covered by HDR was increased to 54. More than half (29) of these countries were in the medium development category and 5 were in high development category. The share of these two groups increased significantly compared to 1990. In 2008, the number of OIC member states remained at its 2000 level. However, the share of medium and high development categories rose further to 59 percent and 19 percent respectively.

	1990		2000		2008	
	# of	%	# of	%	# of	%
HDI Category	Countries		Countries		Countries	
Low Human Development	22	58	20	37	12	22
Medium Human Development	14	37	29	54	32	59
High Human Development	2	5	5	9	10	19
Total	38	100	54	100	54	100

 Table 6: OIC Member States by human development level, 1990, 2000 and 2008

Source: Own calculations from corresponding years' HDR.

Note: The methodology of HDI has evolved over time. Therefore, the HDI values and hence categories are not fully comparable over time.

Table 7 and Table 8 can be interpreted as transition matrices. According to Table 7, out of 21 OIC member states which were placed in low development category in 1990, 18 ended up in the same category in 2000 and 3 climbed to medium development category. There was no transition from medium development category neither downwards nor upwards. For two countries in high

development category in 1990, one country remained in the same category in 2000 and the other fell to medium category.

		2000			
		Low HD	Medium HD	High HD	
	Low HD	18	3	0	
1990	Medium HD	0	14	0	
	High HD	0	1	1	

#### Table 7: Transition between development categories from 1990 to 2000

Source: Own calculations from corresponding years' HDR.

All the transitions between 2000 and 2008 were upwards. Out of 20 OIC member states in low development category in 2000, 8 were upgraded to medium and the rest remained in the same category. For medium category in 2000, 23 stayed in the same category and 5 were placed in high development category. There was not any transition for the high development category in 2000. All the 5 countries in high category in 2000, remained in the same category in 2008.

Table 8: Transition between development categories from 2000 to 2008

		2008			
		Low HD	Medium HD	High HD	
	Low HD	12	8	0	
2000	Medium HD	0	23	5	
	High HD	0	0	5	

Source: Own calculations from corresponding years' HDR.

In 2009 HDR, the shares of low and medium development category were 25% and 51% respectively. That means, three out of four OIC countries were in either low or medium development category and only one in high or very high development category. This image changed slightly in 2016 HDR. Almost two thirds of the OIC member states were placed in either low or medium category. However, the share of low development category increased significantly to 41% in 2016 from 25% in 2009. These changes from 2009 to 2016 should not be interpreted as improvement or deterioration in human development of OIC member states since the HDI methodology changed in 2010 significantly. Therefore, the HDI scores in 2009 and 2016 are not fully comparable.

#### Table 9: OIC Member States by human development level, 2009 and 2016

	200	2009		.6
	# of Countries	%	# of Countries	%
Low Human Development	14	25	23	41
Medium Human Development	28	51	12	21
High Human Development	9	16	15	27
Very High Human Development	4	7	6	11
Total	55	100	56	100

Source: Own calculations from corresponding years' HDR.

Note: The methodology of HDI has evolved over time. Therefore, the HDI values and hence categories are not fully comparable over time.

The transitions between categories from 2015 to 2016 are given in Table 10.

Table 10: Transition between development cat	tegories from 2015 to 2016
----------------------------------------------	----------------------------

			2016					
		Low HD	Medium HD	High HD	Very High HD			
	Low HD	22	1	0	0			
ы	Medium HD	1	11	1	0			
201	High HD	0	0	14	0			
	Very High HD	0	0	0	6			

Source: Own calculations from corresponding years HDR.

# 3. Efforts on Poverty Alleviation

In this section poverty alleviation efforts in the world with a focus on Millennium Development Goals (henceforth MDGs) and Sustainable Development Goals (henceforth SDGs) will be elaborated first. Afterwards, poverty alleviation efforts in the OIC Region will be summarized.

# 3.1. Efforts in the World<sup>23</sup>

### 3.1.1. Millennium Development Goals

In 2000, the world agreed upon the MDGs. This agreement reflect the world leaders commitment to a new global partnership to ending poverty and hunger, improving education, gender, health and promoting sustainable development. Under this understanding, eight goals with a deadline of 2015 were set. These goals, namely MDGs, were:

- 1. Eradicate extreme poverty and hunger
- 2. Achieve universal primary education
- 3. Promote gender equality and empower women
- 4. Reduce child mortality
- 5. Improve maternal health
- 6. Combat HIV/AIDS, malaria and other diseases
- 7. Ensure environmental sustainability
- 8. Develop a global partnership for development

Despite its multisectoral approach, the main objective of MDGs was poverty alleviation. Goal 1 was directly, the remaining were indirectly addressing poverty. In fact, Goal 2,3,4,5,6,7, and 8 under the MDGs were priority areas that must be addressed to eliminate extreme poverty. The aim was to make the nations to accept the MDGs as national goals and increase the coherence and consistency of national policies and programs while trying to achieve these goals.

Under the MDGs, 21 targets and 60 indicators were officially defined to monitor the progress of the countries. The progress during the MDG period (2000-2015) in the selected indicators is summarized below:

Under the first goal, extreme poverty (less than \$1.25 a day) declined significantly from 36 percent in 1990 to 14 per cent as of year 2015. The proportion of undernourished people in the developing regions has fallen by almost half from 23 per cent to 13 per cent in the same period. Under the goal 2, the primary school net enrolment rate has reached to 92 per cent in 2015, up from 81 per cent in 1990. Under goal 3, the target to eliminate gender disparity in primary secondary and tertiary education almost fully achieved. Under goal 4, the global under-five mortality rate has declined by more than half from 90 to 46 deaths per 1,000 live births. Under goal 5, the maternal mortality ratio has declined from 380 deaths per 100,000 live births to 210

<sup>&</sup>lt;sup>23</sup> This section is mostly adapted from the previous work of COMCEC & IDB (2015). The authors of this report made minimal contribution to the content.

deaths per 100,000 live births. Under goal 6, new HIV infections fell by approximately 40 per cent. Under goal 7, the share of population using improved drinking water source rose from 76 percent to 90 percent and the proportion of population using an improved sanitation facility climbed from 47 percent to 64 percent. Under goal 8, official development assistance from developed countries increased by 66 per cent in real terms between 2000 and 2014, reaching \$135.2 billion<sup>24</sup>

Despite these major achievements, there are still significant challenges on the way to reach the MDGs. For instance, related to Goal 1, hunger remains as a global challenge, since the ratios of undernourishment and child under-nutrition are still high, progress on maternal mortality rate is slow to reach the target of reducing this rate by three quarters by 2015, the proportion of vulnerable employment was not decreased with a remarkable pace, not every child has chance to enroll and complete primary school, a noteworthy change has not been realized in the proportion land area covered by forest (COMCEC, 2015).

### 3.1.2. Sustainable Development Goals

To follow and reinforce the commitment to the unfinished MDGs after 2015, the Post-2015 Development agenda in which the SDGs are at the core has been designed and declared at the UN Special Summit in September 2015. While the MDG agenda mostly focused on the challenges of the poor countries, SDG envisages a transition to a more comprehensive development framework that concerns all countries regardless of their level of development.

The Post-2015 Development Agenda provides a unique opportunity to end poverty, to protect the planet, and to ensure prosperity and well-being of people. The new development framework forces a transition from the MDG agenda focused on the challenges of the poor countries to a more comprehensive sustainable development agenda that concerns all countries regardless of their level of development. Besides, the new development agenda in which SDGs at the core will have implications for all development actors from the national to the international level. International and regional development actors will have a tremendous role for translating the goals and targets into action.

The adapted 17 SDGs are listed below:

- 1. No Poverty End poverty in all its forms everywhere.
- 2. **Zero Hunger** End hunger, achieve food security and improved nutrition and promote sustainable agriculture.
- 3. **Good Health and Well-being** Ensure healthy lives and promote well-being for all at all ages.
- 4. **Quality Education** Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all.
- 5. **Gender Equality** Achieve gender equality and empower all women and girls.

<sup>&</sup>lt;sup>24</sup> The figures for goals 1 to 7 are from World Bank (2016). The figure for goal 8 is from UN (2015a).

- 6. **Clean Water and** Sanitation Ensure availability and sustainable management of water and sanitation for all.
- 7. **Affordable and Clean Energy** Ensure access to affordable, reliable, sustainable and modern energy for all.
- 8. **Decent Work and Economic** Growth Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all.
- 9. **Industry, Innovation and Infrastructure** Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation.
- 10. **Reduced Inequalities** Reduce income inequality within and among countries.
- 11. **Sustainable Cities and Communities** Make cities and human settlements inclusive, safe, resilient and sustainable.
- 12. **Responsible Consumption and Production** Ensure sustainable consumption and production patterns.
- 13. **Climate Action** Take urgent action to combat climate change and its impacts by regulating emissions and promoting developments in renewable energy.
- 14. Life Below Water Conserve and sustainably use the oceans, seas and marine resources for sustainable development.
- 15. **Life on Land -** Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss.
- 16. **Peace, Justice and Strong Institutions** Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels.
- 17. **Partnerships for the** Goals Strengthen the means of implementation and revitalize the global partnership for sustainable development.

Among these, Goal 1 directly addresses poverty alleviation in the world. Furthermore, Goals 2, 3, 4, 5, 6, 7, 8, 10 and 17 are indirectly related to poverty alleviation. However, this does not be interpreted as the other goals are completely irrelevant of poverty reduction. The remaining seven goals are also serving poverty reduction but at a lesser degree compared to others.

# **3.2. Efforts in the OIC Region**

In this section main poverty alleviation efforts under the OIC umbrella will be analyzed in terms of the activities of the OIC Institutions.

### **COMCEC Strategy**

Poverty alleviation has an important place in the agenda of the COMCEC. As mentioned in the first section, poverty is a significant challenge in the OIC Region particularly among the African Member countries. The COMCEC Strategy adopted by the 4th Extra-ordinary Islamic Summit Conference held in Makkah on 14-15 August 2012, has identified poverty alleviation as one of its six cooperation areas. Furthermore, "Eradicating extreme poverty and hunger in the OIC Region" has been determined as a strategic objective.

The COMCEC Strategy has identified four output areas in its Poverty Alleviation Section, which are aid effectiveness, productive capacity of the poor, effective utilization of financial resources and monitoring poverty.

The COMCEC Poverty Alleviation Working Group has been established within the framework of the implementation of the COMCEC Strategy. The Working Group (WG) provides a regular platform in this field for the country experts to deliberate on the issues related to poverty, and to share their experiences and good practices. The Poverty Alleviation Working Group (WG) meets twice a year in Ankara. Up to now nine WG meetings of the COMCEC Poverty Alleviation Working Group were held. The tenth WG Meeting will be held on October 5<sup>th</sup>, 2017 with the theme of "Education of Disadvantaged Children in the OIC: The key to escape from poverty".

The Strategy has also introduced a well-defined Project Funding Mechanism for the realization of the COMCEC Projects. In this respect, the Member Countries' and the relevant OIC Institutions' technical cooperation and the capacity building projects which will serve to the realization of the objectives of the COMCEC Strategy and to multilateral cooperation are funded by the COMCEC Coordination Office.

# Islamic Solidarity Fund for Development (ISFD) and Special Program for Development of Africa (SPDA)

Islamic Solidarity Fund for Development (ISFD) is a special fund within the IDB. In line with the decision of the 3rd Extraordinary Islamic Summit held in 2005 in Makkah, the Fund was officially launched in 2007. The fund focuses on human development, alleviating poverty through enhancing the productive capacity of the poor, reducing illiteracy and eradicating diseases and epidemics, particularly Malaria, Tuberculosis (TB) and HIV/AIDS, agriculture and rural development, basic infrastructure and micro enterprises. The principle target capital of the fund is US\$10 billion. The Fund was established in the form of a Waqf, meaning that the activities and projects under the ISFD can only be financed from the revenues obtained from its capital resources. As of April 2017, total amount of received contributions is US\$ 2.68 billion. As of 2016, cumulative approvals were US\$ 664.8 million for 106 operations in 33 Member Countries.

In accordance with the relevant decision of the 3rd Extraordinary Islamic Summit held in 2005 in Makkah, Special Programme for Development of Africa (SPDA) has been initiated by the IDB Group with the aim of supporting African OIC Member Countries, particularly least developed ones, in their poverty alleviation and economic development endeavors for the emergence of sustainable economic growth and the reinforcement of regional integration. The target capital of the SPDA is \$12 billion. As the end of 2016, total disbursements was US\$ 1525 million, which brought the total disbursements since 2012 to date to US\$ 5.4 billion.

### **Capacity Building Activities of SESRIC**

Vocational education and training issues have significance impacts on enhancing the productive capacity of the poor. In this respect, a programme on vocational education and training was initiated by the Statistical, Economic and Social Research and Training Centre for Islamic Countries (SESRIC) in 2009. The main target of this Programme (OIC-VET) is to provide opportunities to individuals to develop their knowledge and skills; thus to contribute to the development and competitiveness of the economies of the Member Countries.

Main objectives of OIC-VET are;

- to provide the exchange of people involved in VET throughout OIC Member Countries, so as to increase placements in enterprises.
- to enhance the quality and innovation capacity of Member Countries' vocational training systems, and to facilitate the transfer of innovative practices from one country to another.
- to increase the volume of cooperation among training institutions, enterprises, social partners and other relevant bodies throughout OIC Member Countries
- to expand the transparency and recognition of qualifications and competencies, including those acquired through formal and informal learning among Member Countries.
- to support the development of innovative Information and Communication Technology based on content, services, pedagogies and practice for lifelong learning.

Capacity building programmes have been initiated in 22 different social and economic programmes with many sub-themes within the framework of the OIC-VET Programme. The beneficiaries of OIC-VET Programme are governments, local administrations, public/private institutions, companies, researchers and practitioners.

# **Concluding Remarks**

There is a significant level of extreme poverty in the OIC Member Countries with more than 270 million people suffering from poverty. Poverty headcount ratios of the member countries differ from zero percent to almost 69 percent. Likewise, non-monetary poverty indicators also vary across the OIC Member Countries. As non-monetary indicators, Human Development Index values of the OIC Member Countries are between 0.864 and 0.352, Multidimensional Poverty Index values are between zero and 0.584 among the countries for which the MPI is calculated, and Global Hunger Index values are between zero and 44.3.

Aiming to provide an overview of poverty status in the OIC Member Countries, this report elaborates on monetary and non-monetary poverty, with a special focus on human development progress in the OIC Member Countries.

The OIC Member Countries do not form a homogenous group in terms of poverty. While 7 member countries are in high income group, 16 are in upper-middle income, 18 are in lower-middle income, and 16 are in low income group. High income OIC Countries have GDP per capita (Current international PPP) levels which are above \$42,000. In the upper-middle income OIC Countries GDP per capita levels have a diverse pattern, ranging from \$7,819 to \$27,681, and all the countries in this group have low or moderate GHI values except Iraq which is in serious situation. 14 out of 16 upper-middle OIC income countries are in high human development category. On the other hand, in these countries the population living in multidimensional poverty exceeds the population living in income poverty. 12 out of 18 countries in lower middle income group have GDP per capita levels which are lower than \$6,000. On the other hand, poverty rates in this group display a diverse picture. Indeed, poverty rate ranges from less-than 1 percent to more-than 67 percent. Lower-middle income OIC countries can be classified under low or medium human development categories. Multidimensional poverty situation is more severe than monetary poverty situation in these countries, since in almost half of the lower-middle income countries, more than 40 percent of the population is multi-dimensionally poor.

Regarding low income OIC Member Countries, both monetary and non-monetary poverty indicators are striking. GDP per capita (Current international PPP) levels are less than \$ 2,568 in this group, and poverty headcount ratios are above 13.5 percent. All countries in this group can be classified as low-income food-deficit country. They have also serious or alarming hunger situation (except one moderate situation). Moreover, all low income OIC countries are classified under low human development category in the ranking of human development index, and multidimensional poverty rate of most of the countries in this group is higher than 50 percent.

Regarding human development progress, the OIC experienced an improvement in HDI level. Between 1990 and 2015 the average HDI level of the OIC rose from 0.500 to 0.621. However, it remained significantly below the OECD and world average. Moreover, the gap between the OIC and developing countries has enlarged in the last 25 years from 0.014 to 0.047 points. This implies the human development progress in the OIC was slower than that of in developing countries.

Furthermore, the new development agenda, namely the SDGs, will have significant implication for all countries. The implementation of the SDGs will also have an important place in the OIC development agenda. In line with the global development agenda, the OIC countries and institutions have been exerting efforts for alleviating poverty in the Member Countries through several programs such as ISFD, SPDA and OIC-VET.

# ANNEXES

#### Annex 1: The Widely Used Non-Monetary Poverty Indices

#### <u>Human Development Index</u>

Human development approach relies on a view that poverty is a multidimensional phenomenon. This perspective is inspired by Amartya Sen's<sup>25</sup> notion of well-being and poverty. Within the context of human development in order to investigate development by assuming that it is something beyond income and economic growth rates of countries the UNDP calculates a Human Development Index (HDI).<sup>26</sup> The HDI defines people as "the real wealth of a nation"<sup>27</sup> and posits *health, knowledge* and *income* as three basic aspects of human measures for development, and calculates a country's average achievements in these areas. In conclusion, the HDI sees poverty in terms of human poverty and defines it as a lack of income, education and health.<sup>28</sup>

The HDI utilizes four indicators, namely GNI per capita, mean years of schooling, expected years of schooling and life expectancy at birth, under three dimensions (Figure 25). When being calculated the index, minimum and maximum values are set in order to transform the indicators into indices between 0 and 1. The HDI is calculated by taking the geometric mean of the three dimension indices.

#### Figure 25: Dimensions of the HDI

Source: The UNDP, 2015.

#### Multidimensional Poverty Index

Within the context of human development thinking, in addition to HDI, the UNDP have started to calculate MPI, in order to measure poverty in a much broader context, since 2010. The MPI considers multiple deprivations of the population and their overlap by utilizing the dimensions of health, education and standard of living (Figure 26). While the health and education dimensions are similar to the dimensions of HDI, but use different indicators, the standard of

<sup>&</sup>lt;sup>25</sup>Sen 1987 quoted in Haughton and Khandker 2009, p.2.

<sup>&</sup>lt;sup>26</sup>Klugmanet.al. 2011, p.250; Sagar and Najam 1998, p.251

<sup>&</sup>lt;sup>27</sup>The UNDP 1990, p.9.

<sup>&</sup>lt;sup>28</sup>The UNDP 1990, p.63.

living is a different dimension that consists of six indicators related to basic living standards. On the other hand, income is not included in the calculation of MPI.

Deprivation in education is examined by years of schooling and child school attendance, deprivation in health is measured by child mortality and nutrition, and deprivation in living conditions is measured by electricity, improved sanitation, drinking water, flooring, cooking fuel, and asset ownership.

Because each main dimension is equally weighted in calculation of the index, one dimension affects the index 33 percent at most. Also each component of dimensions has equal weight. MPI has maximum and minimum scores for its three dimensions and the related indicators, which demonstrates for a household a maximum deprivation value of 10 and a minimum value of zero. A household having a deprivation value of 3 and more is considered as living under multidimensional poverty, and one who has a value between 2 and 3 is recognized as being under the risk of multidimensional poverty. (The UNDP, 2010b:215-222).

#### Figure 26: Dimensions of the MPI

#### Source: The UNDP, 2015.

#### **Global Hunger Index**

Global Hunger Index (GHI) which is calculated by the International Food Policy Research Institute (IFPRI) is a significant indicator that reveals the state of hunger for countries. The GHI displays the level of hunger by taking undernourishment<sup>29</sup>, child wasting, child stunting and under-five mortality rate into account. The methodology of GHI is revised in 2015 report. According to this new methodology, GHI scores on a 100-point scale where 0 is the best score (no hunger) and 100 the worst. In practice, neither of these extremes can be attained. . A value of 100 means that the country' undernourishment, child wasting, child stunting and child mortality levels are the same as the maximum thresholds in all the dimensions. A value of zero

<sup>&</sup>lt;sup>29</sup> "Undernourishment" indicates the calorie consumption of fewer than 1,800 a day, which is thought to represent the minimum calorie requirement that most people need to live a healthy and productive life. (FAO, 2011a quoted in IFPRI et.al., 2013:7)

imply that the country has no undernourished people, no wasted or stunted children under five year age and under-five mortality rate is zero.

A GHI value addresses to a low hunger situation when it is under 10, moderate when it is between 10.99 and 19.9, serious when it is between 20 and 34.9, alarming when it is between 35 and 49.9, and extremely alarming when it is above 50.

For technical details on the GHI methodology go to <a href="http://ghi.ifpri.org/methodology/">http://ghi.ifpri.org/methodology/</a>

#### Annex 8: The Official 3 Regional Groups of the OIC Member Countries

Note: Guyana and Suriname are in Latin America Region. However due to the limited number of countries in that region, they are included in the Asian Group.
